## *Ecology of Food and Nutrition*

New  
Editor!

### ABOUT THE JOURNAL

*Ecology of Food and Nutrition* is an international journal of the nutritional sciences in the broadest sense. It emphasizes foods and food systems and their utilization to satisfy human nutritional needs, but it also examines nonfood factors that contribute to the spectrum of nutritional conditions, such as obesity and leanness, malnutrition vitamin requirements and mineral needs. The content scope is thus wide; articles may consider dietary and nutritional status issues arising from cultural prohibitions, traditional usages, and problems of marketing and transportation. Food nutrients and toxicants, additives and food quality are also topics considered, as are ethnobotany, agriculture and development.

Many of the journal's contributors are trained in nutrition, nutritional science and food technology, but the behavioral and social sciences, including psychology, geography and economics, are also represented, as are the food industry and its critics. Questions of taste, flavor, and acceptability are as germane to the journal as interactions among nutrition and environment, infection, physical fitness, pregnancy, child health, problems of aging, and cross-cultural comparisons.

### MANUSCRIPT SUBMISSION

The *Ecology of Food and Nutrition* is currently accepting manuscripts for consideration of publication. Manuscripts should be typed pages, double spaced (including references and abstract). The journal is published six times a year and is now with a new editor-in-chief and editorial board. For more information on how to prepare articles for publication, visit the journal's web site at: [www.informaworld.com/gefn](http://www.informaworld.com/gefn) and click on "Instructions for Authors" in the "Journal Information" column. You may also contact the editor-in-chief at:
