Marine and Freshwater Behaviour and Physiology considers all manuscripts on the strict condition that they have been submitted only to *Marine and Freshwater Behaviour and Physiology*, that they have not been published already, nor are they under consideration for publication or in press elsewhere. Authors who fail to adhere to this condition will be charged with all costs which *Marine and Freshwater Behaviour and Physiology* incurs and their papers will not be published.

Contributions to *Marine and Freshwater Behaviour and Physiology* must be original research reports or reviews and will be subjected to review by referees at the discretion of the Editorial Office.

Papers for consideration should be sent to the Editor-in-Chief, Professor David L. Macmillan:

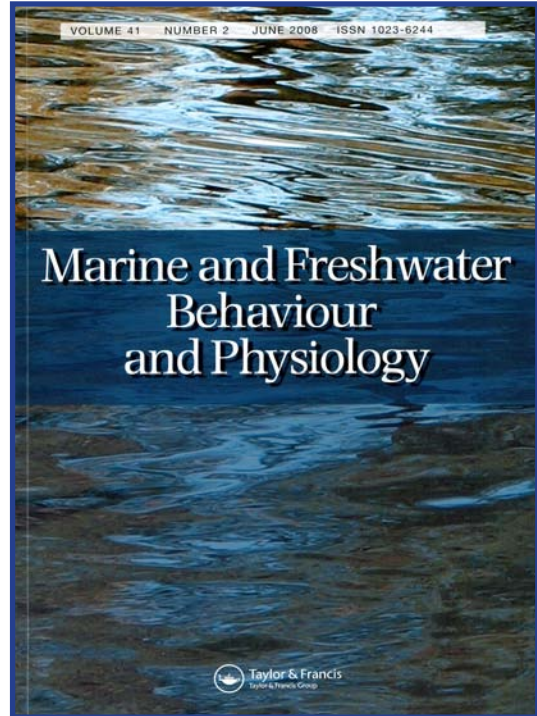

Department of Zoology
University of Melbourne
3052 Victoria
Australia

Email: dlmacm@unimelb.edu.au

Marine and Freshwater Behaviour and Physiology is a bi-monthly publication devoted to research into the behaviour and physiology of marine and freshwater animals. It covers field and laboratory studies of the behaviour and physiology of aquatic animals including excretion, osmoregulation, digestion, respiration, feeding, migration, reproduction, tidal and biorhythms, neurobiology, movement, sensory biology and anatomy and fine structure (where embedded in a physiological context).

The behaviour of aquatic animals, both natural and simulated in the laboratory, also fall within the ambit of the journal. Short reviews will be published and occasional book reviews.

The living resources of the world's oceans, rivers and lakes are attracting increasing attention as food sources for humans and for their role in global ecology. The journal will therefore publish the results of research in the areas of Fisheries Biology, Fisheries Technology, Fisheries Oceanography, Fisheries Economics and Management, Fisheries Engineering or Seafood Science and Technology where these have clear links to behaviour and physiology.
