

Call for Papers

The [*Journal of Experimental & Theoretical Artificial Intelligence*](#) (*JETAI*) provides a forum for the presentation, evaluation and criticism of research results, the discussion of methodological issues, and the communication of positions, preliminary findings and research directions in artificial intelligence. *JETAI* features work in all subfields of AI research that adopts a scientific rather than engineering methodology, focusing on work in cognitive science, problem-solving, perception, learning, knowledge representation, memory and neural system modelling.

The Journal is particularly keen to receive papers on the following topics:

- Theoretical cognitive science
- Cognitive robotics
- Intelligent agents
- Recognitional concepts and the plasticity of mind
- New architectures for intelligent processing

If you are interested in submitting a paper, please visit the [*JETAI* website](#) for full instructions for authors and downloadable style guides for manuscript preparation.
