

## MARCEL F. NEUTS APPLIED PROBABILITY AWARD

---

Each year, The Marcel F. Neuts Prize is awarded for the best paper in ***Stochastic Models***. This award is in honor of Professor Marcel F. Neuts, founding editor of ***Stochastic Models***, and is presented each year at a meeting of the Applied Probability Special Interest Group of INFORMS. The prize was established in 1997 on the occasion of Professor Neuts's retirement and is funded by associates of Professor Neuts and Taylor & Francis Group. The winner is selected by a team of ***Stochastic Models*** editors.

Please see below for previous winning papers, which can be viewed for free:

- *Volume 20 winner*  
[Performance Characteristics of Multicast Flows on Random Trees](#)  
by Bartłomiej Błaszczyszyn and Konstantin Tchoumatchenko,  
2004, 20(3), 341-361
- *Volume 19 winner*  
[Empirical Testing of the Infinite Source Poisson Data Traffic Model](#)  
by C.A. Guerin, H. Nyberg, O. Perrin, S. Resnick, H. Rootzen and C.  
Starica, 2003, 19(2), 151-200
- *Volume 18 winner*  
[On Latouche-Ramaswami's Logarithmic Reduction Algorithm for Quasi-Birth-and-Death Processes](#)  
by Qiang Ye, 2002, 18(3), 449 - 467
- *Volume 17 winner*  
[Stability and Performance of Stack Algorithms for Random Access Communication Modelled as a Tree-Structured QBD Markov Chain](#)  
by Benny van Houdt and Chris Blondia, 2001, 17(3), 247-270
