

## Submitting regular papers:

*HCI* seeks original research papers of high quality and broad relevance that are within its Aims & Scope. *HCI* is an interdisciplinary journal, and so all papers must have both scientific results – how technology is actually used – and relevance for how systems should be designed.

*HCI* favors substantial papers based on extensive research rather than shorter papers, papers based on narrowly-focused issues, papers of only specialized interest, or papers reporting preliminary results.

Theoretical, framework, or review papers, or even essays, are welcomed; but they are expected to develop new concepts, present rigorous analysis, and show relevance to design. Papers articulating new or “non-standard” perspectives are also welcome.

You may contact the Editor, Thomas Moran ([moran@acm.org](mailto:moran@acm.org)) if you have any questions about the appropriateness of your work for *HCI*.

Send your submission via email to the Administrative Editor, Patricia Sheehan ([patricia.sheehan@parc.com](mailto:patricia.sheehan@parc.com)). Word or PDF file formats are preferred, but any readable format is acceptable for initial submission and reviewing.

As a convenience, you can download a [Word template](#) for your paper. Final manuscripts will be expected to conform to the *HCI* journal style, which is described in the [Guidelines for Final Submissions](#).

## Submitting papers to special issues:

Submission to a special issue has the same requirements as for regular submission, plus the topical and temporal constraints of the special issue. See the Call for Participation.

Contact the Special Issue Editors for further information.

## Submitting proposals for special issues:

Send inquiries and proposals to the Editor, Thomas Moran ([moran@acm.org](mailto:moran@acm.org)).
