Annals of Human Biology is an international, peer-reviewed journal published six times a year in electronic format. The journal reports investigations on the nature, development and causes of human variation, embracing the disciplines of human growth and development, human genetics, physical and biological anthropology, demography, environmental physiology, ecology, epidemiology and global health and ageing research. The main audience for the Annals consists of human biologists, anthropologists and population geneticists but the journal also has a wide, international readership including epidemiologists, paediatricians, gerontologists, physiologists and public health workers.
